Focus Instruction with Essential Information

Measures of Academic Progress (MAP) K – 12 interim assessments provide essential information about a student’s continuum of learning and growth trajectory. MAP is a tool to help identify strengths and opportunities and focus instruction on the areas of greatest need.
We want a year’s growth for every child in the district no matter where they are. And that gets at the heart of why we are involved in MAP. Through MAP, we’ve been able to pinpoint what skills are needed to make sure they get that year’s progress.

Dr. Lewis Holloway
Superintendent
Bulloch County Schools, Georgia

The MAP Assessment Suite

- MAP for Reading, Language Usage, and Mathematics
- MAP for Science
- MAP for Primary Grades (MPG) for Reading and Mathematics
- End of Course Assessments in Mathematics

MAP assessments are computer adaptive and produce accurate, reliable data that reveal the precise learning level of every student, regardless of the student’s ability or grade level. MAP identifies areas of strength and opportunity at the goal level of a subject, as well as overall performance. Educators use MAP data to inform in-the-moment instructional practices, gain insights into college readiness, and view grade-independent academic growth.

MAP is a K – 12 interim assessment designed to provide educators and students with the most positive and purposeful testing experience possible. MAP produces highly accurate data on student academic growth, and reliable detailed information about what each student knows and what they’re ready to learn.

All MAP assessments—including those aligned to the Common Core—are designed to measure growth over time. Every test item is anchored to a vertically-aligned equal-interval scale that covers all grades. MAP provides a consistent longitudinal measure of student growth, regardless of whether scores on your new state summative assessment show drops in student performance and proficiency due to curriculum misalignment.

For four decades, education professionals have relied on MAP data for decision making on all levels, from individual learning plans to district-wide initiatives. Educators use MAP data to enhance the educational experience of close to 8 million students annually worldwide.
Identify Each Student’s Performance Level with Pinpoint Precision

*Computer Adaptive Assessment*

MAP is adaptive in that it dynamically adjusts to the performance level of each student by choosing items that are moderately challenging for that student—both at, above, or below the student’s registered grade level. MAP is unlimited in terms of how far up or down it adapts to determine an individual student’s level.

This exacting measure empowers educators to differentiate instruction at the precise level of the individual student, including those most at risk. MAP challenges the top performers while not overwhelming students whose skills are below grade level. No students are lost at the upper and lower levels of achievement.
**The Stability of the RIT Scale**

The RIT scale (for Rasch Unit) was developed by NWEA over 30 years ago according to Item Response Theory principles.

The RIT value of a test item is obtained using a rigorous calibration process that ensures the integrity of the assessment. Before an item is included in MAP tests, it is field tested with thousands of students across the nation; results from those tests allow us to calibrate the items precisely.

Regardless of the standards alignment of a particular test, a given item has a single RIT value associated with it. This underlying design of MAP tests is critical to ensuring that RIT scores carry the same meaning, in terms of student ability, regardless of which test or set of standards was used to obtain them.

Responses to items in a student’s test event are used to generate the final RIT score for the student. The numerical (RIT) value assigned to a student represents the level of test item difficulty at which he or she is capable of answering correctly approximately 50% of the time.

The RIT scale is continuous across grades, making it ideal to track student achievement growth both within a school year and across adjacent school years.

---

**MAP empowers educators to identify the following:**

- Students in need of intervention
- Talented and gifted students
- Students requiring targeted instruction
- Students ready for enrichment activities
- Students ready for ability grouping

---

*Adaptive tests* provide more precise measurements to use when making individual status and progress decisions for all students, but particularly for lower and higher performing students when compared with fixed-form alternatives. Traditional tests are designed to capture information about the group of students performing at the targeted level, most likely the average student, but reveal little about students closer to either end of the scale.
The Standard Error of Measurement (SEM), which reflects the amount of error in the student’s score, is reduced with each response on a MAP test. By the time the student reaches the final test item, the assessment has pinpointed his or her true performance level with precision. The size of the standard error of measurement is a function of the match between item difficulty and student proficiency level.

Because MAP is highly accurate, the tests contain fewer items than standard fixed-form tests, resulting in a double benefit for users: Results that are more reliable from a test that takes less time to administer.

**Computer Adaptive Assessment:** MAP tests begin with a grade-level question, then adapt throughout the test in response to each student’s performance. Correct answers trigger a more challenging item to be presented next; if a student misses a question, the follow-up item is easier.

**The Gain Score Model**

MAP users are most concerned about the change in learning of their students from one term to the next. As a result, MAP supports extensive use of the true gain score model, a growth model that defines how much true learning growth has occurred in the intervening time measured by the true difference between two test scores. The resulting growth measure offers a direct measure of how much a student has progressed over a given time period.

With MAP assessments, a student’s test score from the fall may be compared to their test score in the spring, and the resulting gain score is called an “absolute” measure of their fall-to-spring growth. This absolute measure can also be applied to understand the student’s longitudinal growth over multiple years, even with changes in curriculum or standards.

**Aligned to Standards**

MAP is aligned to all state content standards, including the Common Core State Standards, so it provides educators with high-value comparative data and the ability to project proficiency on high-stakes tests. NWEA Research conducts regular linking studies to ensure that performance on MAP is interpretable according to the specific performance standards of every state.
**MAP Achievement and Growth Norms**

Norms help educators move beyond the simple conclusion that a student either “made target growth” or did not to discern how a student compares with the achievement and growth of students in his or her normative peer group.

Using a nationally representative sample of MAP test scores from over five million students, NWEA conducts regular norming studies that determine mean growth for each term and subject. The 2015 NWEA norming study, currently in development, will include students whose districts or states have adopted the Common Core and those who have not.

**Achievement norms** show a student’s percentile ranking in a national student population. These norms provide a reference point for educators to review data, and they help educators gain an understanding of each student’s current achievement level and the extent of their progress.

**Growth norms** allow for comparisons with an explicit standard to show amounts of growth. With MAP assessments, a student’s fall-to-spring gain score may be compared with the average fall-to-spring gains made by students who share his or her fall score. The comparison of gains over time, or gains that are observed in different contexts, results in statements about learning productivity.

![Learn more about NWEA Normative Data and the RIT Scale Norms Study](image)

**Growth Analysis Simplified**

NWEA offers customized norms-based reports for district and school leaders who require easy-to-access comparative data to inform decisions about program planning, professional development, and curriculum.

**Standard Comparison Groups** reporting is preloaded with selected student growth data. Simple tables and filters provide a view of growth by school or by groupings such as achievement level, grade, ethnicity, or gender and provide graphical representations showing how students’ growth compares to national norms. **Virtual Comparison Groups** reporting takes leaders beyond local or regional comparisons to see how a group of students is growing compared to student groups across the country matched by key demographics and achievement attributes.

Both types of customized reports are derived from data in the NWEA **Growth Research Database (GRD™)**, the world’s largest repository of longitudinal student assessment data.

---

**MAP norms** allow for comparative data to inform instructional decisions. The information can be used at all levels to guide decisions concerning differentiated instruction, flexible grouping, or tiered instruction.

Track Student Growth—Month to Month and Year After Year

The power of MAP is in the unparalleled assessment data it generates and archives, and the resulting window it provides into a student’s educational trajectory through every school year from K through 12. When combined to form a complete interim assessment suite, MAP assessments present valid and reliable results that support growth measurement and benefit students, teachers, and parents year after year.
MAP for Mathematics, Reading, and Language Usage

Developed for students in grades 3 – 12, MAP for Mathematics, Reading, and Language Usage pinpoints each student's learning level on core concepts and provides educators with a wealth of information they can use to promote student growth every day. Common Core MAP is available, as well as MAP assessments aligned to individual state standards.

Goal structures are the foundation of the MAP assessments: For Reading, goal areas include Word Recognition, Structure and Vocabulary, and Reading Informational Texts; Language Usage goal areas include Craft Structure and Evaluation, Grammar and Usage, and Writing Conventions; and goal areas for Mathematics include Algebra, Geometry, Measurement, Problem Solving, Reasoning, and Proofs.

See MAP goal structures for all 50 states and the District of Columbia.

MAP for Science

Designed for students in grades 3 – 10, MAP for Science covers specific concepts within the three major domains of science: life sciences, earth and space sciences, and physical sciences.

MAP for Science assessments are helpful for assessing students prior to more specialized science curricula in upper high school. The assessments are aligned to state standards and to the national standards established by The American Association for the Advancement of Science Benchmarks for Science Literacy and the National Research Council’s National Science Education Standards.

End of Course Assessments in Mathematics

Five End of Course Mathematics tests for upper-level math courses are included in every MAP license. As opposed to pretests and mastery tests, End of Course assessments are designed to measure student understanding of specific content after a year of instruction, and the data that results can indicate whether the student is ready to move to the next mathematics course in the sequence.

End of Course assessments are available for Algebra 1, Geometry, Algebra 2, Integrated Mathematics 1 and 2, and Integrated Mathematics 3.

Tablet-optimized: A MAP delivery alternative

MAP supports the widespread use of tablets in U.S. classrooms with tablet-optimized versions of MAP (excluding MPG) for iPad® and ChromeBook®. This platform significantly improves the testing dynamic for students and teachers.

With tablet-optimized MAP assessments, educators are able to administer the tests in their classrooms, freeing up computer labs for instruction. Allowing students to test in their own classrooms also improves their comfort level—a factor that reduces test anxiety and contributes to test performance.
As an assessment director, what I value most is the research incorporated into the whole MAP system. Especially for our youngest students, MAP for Primary Grades data help us more than any other tool with guiding grouping decisions. We have a wide variety of abilities in each class, yet our focus is on what each individual child needs. With MAP and MPG, we have a great deal of confidence in our decision making.

Elizabeth Parks
Director of Assessment and Research
Blue Valley School District, Kansas

The MPG assessment system includes three types of computer based assessments:

- **Survey with Goals** – Broad surveys of reading and mathematics achievement, scored on the RIT scale
- **Screening Tests** – Entry level tests of preliteracy and number skills
- **Skills Checklists** – Brief tests of single skills in phonological awareness, phonics, numeracy, and computation
MAP for Primary Grades for Reading and Mathematics

MAP for Primary Grades (MPG) is an assessment package that includes computer adaptive interim assessments and Skills Checklists to provide insight into K – 2 students’ knowledge of core mathematics and reading concepts, as well as their academic growth. By assessing the achievement levels of early learners, educators gain insights they can use to inform instructional decisions and ensure students are on track well before high-stakes testing begins in 3rd grade. Common Core MPG is available, as well as MPG aligned to individual state standards.

Survey with Goals (adaptive, appropriate for universal screening and growth measurement) is the central component, which can be supplemented with use of the Screening Tests and Skills Checklists to dig more deeply into foundational skills throughout the year. In addition to an overall RIT score, the student receives scores for each goal area, allowing teachers to identify areas of relative strength and opportunity within a subject area. Survey with Goals within MPG is recognized by the National Center for Response to Intervention as a universal screening tool. Items adapt to the level of difficulty appropriate for each student and scores are presented on the RIT scale.

The two other types of assessments within the MPG suite (Screening Tests and Skills Checklists) offer additional ways for educators to help gauge student readiness for instruction in the earliest grades, as well as track skill development and mastery throughout the year.

All MPG tests include audio instructions to help young learners understand the test items, and a simplified interface that lets them click a mouse to perform actions.

To be honest, there was no contest. It’s the most well-researched test out there. I’m continually impressed by the norm studies and other research NWEA publishes. I feel good about the quality of the results. When I’m asked about the credibility of the test, I know what I’m saying is research-based.

Colleen Lennon
Curriculum Specialist at Stepstone Academy
Cleveland, Ohio
Transition to the Common Core with MAP

Common Core MAP assessments serve a critical role as you bridge from performance under prior standards to performance under Common Core State Standards. At any stage in the transition, Common Core MAP and MPG scores provide insight into your students’ progress toward demonstrating evidence of their learning, and play a key role in terms of gap analysis, allowing you to be strategic about rewriting curricula and instituting professional development programs.

The New Standards and Shifts in Content

Common Core State Standards (CCSS) create new expectations for student learning and instructional approaches, and Common Core MAP assessments reflect that change.

Educators teaching to the new standards are discovering gaps between their previous state standards and what is now required by the CCSS. In mathematics, CCSS includes a deep focus on conceptual understanding, procedural skills and fluency, and application of skills in problem solving situations. In English language arts, the new standards include more content-rich non-fiction, and regular practice with complex text and its academic language.
The CCSS focus on cognitive complexity, and Common Core MAP assessments use the Depth of Knowledge system to rate the cognitive demand of each assessment item.

The new standards also place increased emphasis on application of critical thinking and problem solving skills in a real-world context and synthesis and integration of knowledge and skills across domain subjects and disciplines.

**Development of Common Core MAP**

NWEA has performed multiple, extensive analyses of the Common Core State Standards, and endorsed the purpose of the standards and the challenge to students: To demonstrate greater depth of knowledge about core subjects, use technology in their answers, and provide evidence of their learning.

NWEA developed items to correspond to the depth and breadth of the new standards and introduced Common Core MAP for Mathematics, Reading, and Language Usage and Common Core MAP for Primary Grades (MPG).

For those states adopting the CCSS and opting to add their own standards content, known as Common Core + 15%, NWEA developed CCSS + 15% MAP tests aligned to the needs of individual states.

"**What Common Core MAP gave us is a new set of results tied to the Common Core that we hadn’t had in the past. We saw the standards shifting from one grade to the next, but this was a very reliable way to be able to pinpoint exactly where standards were falling with our kids in their instructional level, and then make the plans necessary to make those gaps go away.**

Greg Schultz
Assistant Superintendent for Student Learning
Bullitt County Schools, Kentucky
**Technology-Enhanced Items in Common Core MAP**

Along with test items in multiple-choice format, Common Core MAP and MPG assessments will include technology-enhanced and constructed-response items. In combination, these item types help measure the depth and breadth of student comprehension as required by the Common Core.

**Aligned to Common Core standards** for 3rd grade reading, this enhanced Common Core MAP test item has a Depth of Knowledge rating of 3. The standard being assessed is RI.3.8.

**Students are asked to plot points on a graph** in this enhanced Common Core MAP item aligned to 8th grade Common Core standards for mathematics. The Depth of Knowledge rating for this item is 2, and the standard being assessed is 8.EE.5.

**This technology-enhanced mathematics item** from the MPG Common Core assessment is aligned to Common Core standards for 2nd grade mathematics. The item assesses the standard 3.MD.3 and has a Depth of Knowledge rating of 2.

---

Access a range of interactive technology-enhanced Common Core MAP and MPG test items.
**RIT Stability and the Transition to Common Core MAP**

As with all MAP assessments, Common Core MAP supports a stable, valid, and reliable measure of student academic growth. A score of 200 on today’s Common Core MAP assessment has the same meaning as a MAP score of 200 from 30 years ago. RIT scores may be used to measure growth on a longitudinal scale, regardless of changes to standards.

In order for Common Core MAP scores to be used in a meaningful way, test content and instructional content must be aligned. We recommend that educators implement or transition to Common Core MAP or MPG interim growth assessments between academic years to reduce any disruptions to the learning process.

![Access the white paper, Common Core MAP: Supporting Your Transition to the Common Core.](image)

**Common Core MAP and the Consortia Assessments**

States that have joined one of two Consortia—the Smarter Balanced Assessment Consortium (Smarter Balanced) or the Partnership for Assessment of Readiness for College and Careers (PARCC)—are transitioning to Common Core-aligned assessments. These required assessments will measure students’ on-grade proficiency.

By pairing Common Core MAP and MPG with a Smarter Balanced or PARCC summative assessment, you can identify instructional needs and provide a more well-rounded view of student achievement and growth, even if you experience proficiency level drops in your state common assessment.

Consortia summative tests limit educators to assessing student understanding of on-grade Common Core standards, but MAP and MPG inform school-year instruction and provide information about students who are above or below grade level.

During and after your transition to CCSS, you’ll find that Common Core MAP continues to fill an important need: To provide useful, instructionally relevant, and reliable data that can measure student learning growth during a school year, and across school years, on a stable scale.

![Read Better Together: How SBAC Districts Can Gain Critical Teaching and Learning Data with MAP — Today and Beyond](image)

![Read A Powerful Pairing: How PARCC Districts Can Gain Critical Teaching and Learning Data with MAP.](image)

**Five Ways Common Core MAP and MPG Enhance Your Common Core Efforts**

1. Allow you to measure student growth and instructional readiness at the beginning, middle, and end of the year in order to project student achievement on Common Core State Standards.

2. Supply you with norms and growth information that provide important context for data interpretation and evaluation during and after your transition to Consortia assessments.

3. Offer an additional data point for measuring your students’ college readiness.

4. Permit you to evaluate program effectiveness and help guide instruction at the classroom level.

5. Enable you to integrate assessment results with digital instruction, including NWEA educational partners.
Accelerate Growth with Actionable Data

MAP reports are essential tools for maximizing student achievement and helping educators inform not only individual student and classroom instruction, but school and district improvement programs.

**MAP reports are ideal for**

- Planning individual or group instruction
- Measuring student growth and achievement
- Diagnosing student strengths and opportunities
- Student and parent engagement
- Predicting state assessment performance
- Analyzing school or district performance
- School improvement planning
[It’s] the perfect marriage. NWEA gives you the data. So you just have to figure out what data you need, and what is your goal in using it. Because NWEA gives you the what and where, it tells you exactly where your students are functioning. You have to develop the how: How are you going to address your data concerns? How are you going to meet your overall school goals? How are you going to focus on your student achievement?

Jonathan Strong
Reading Coach and member of the RTI team
Confluence Academy, Missouri

Accessing Reports Instantly

Most MAP reports are available instantly. Each MAP test is scored as it is administered and, at the test’s conclusion, provides preliminary results to both student and proctor. More in-depth reports are also available that show aggregate data by class, grade, school, and district.

The content in MAP reports serves many levels of educational decision making. The reports are valuable in many areas:

- Establishing a student’s precise instructional level and identifying which areas to focus on for academic growth
- Comparing a student’s academic progress with other students in the class, grade, school, or district
- Tracking academic growth with precision over a school year or over several years, even through the transition to the Common Core State Standards

School and district leaders use MAP reports to evaluate programs and monitor school and student performance relative to growth, proficiency, and norms.

District decision makers rely on MAP reports to aid in resource management, help determine performance trends by grade and school, and compare local student achievement to the national scale.

Teachers depend on MAP reports to help them create teaching strategies and provide differentiated instruction, and to create flexible grouping across the classroom.

Projected Proficiency Summary Reports allow district leaders to see systemic strengths and weaknesses, identify positive trends, and plan for changes at any grade level or school within the district.

MAP for Primary Grades: Class Report (by Test RIT) – Reading

MAP: Reading Primary Grades Common Core 2010/Common Core English Language Arts K-12: 2010

Projected Proficiency Summary Reports

MAP for Primary Grades reports give teachers insight into the capacity of their youngest students in the areas of mathematics and language usage. These reports, including the MAP for Primary Grades Class Report, provide teachers with student performance data that can help guide strategy and lesson plans.

Access a complete set of sample MAP reports.
Drive Growth with MAP: Six Powerful Approaches

Educators use MAP assessment data to better understand the learning needs of every student. Here are six ways MAP data is commonly used to promote a positive educational experience—and significant student growth—throughout the year.
Differentiating Instruction

Students within the same class often perform at different grade levels, and educators face the challenge of ensuring that every child—from the highest to the lowest achievers—continues to grow. MAP data make it easy to identify learning levels so teachers can engage in differentiated instruction and ability grouping that leads to positive results for every student.

“Instead of teaching to the whole class, the teachers are able to challenge them at the appropriate level within that skill set. And MAP scores form the baseline. It’s the first of several data points used to determine where they are instructionally on that skill.”

Frank Reliford
Principal
Dee-Mack Intermediate School, Illinois

---

Using MAP as a Universal Screener/RTI Placement Tool

A foundational component to an RTI system is the use of universal screening tools that can be used to both identify those students at risk of academic failure and inform a learning plan. MAP fills that need by adapting beyond grade to find the true level of a student’s performance. MAP assessments received the highest possible rating for classification accuracy and high ratings in all other categories from the National Center on Response to Intervention (NCRTI).

“Before using MAP, we were missing the full picture of how to teach kids who were gifted and talented, or struggling to learn, or were English language learners....But now that we know what our students are ready to learn before we even begin teaching them, growth is inevitable—even for our gifted and talented and Title I students.”

Linda Foote
Instructional Technology Specialist
Poway Unified School District, California

---

Read the case study, Using Data to Focus Curriculum on Improvement and Differentiation.

Read the case study, Using MAP Scores as a Key Data Point for RTI.
Evaluating Programs

With tightening budgets and expanding student populations, MAP data have become a key component in assessing the impact of specific programs. MAP scores contribute to understanding what works, so when special programs are instituted, educators can see precisely how much growth has occurred with participating students.

“If it’s refined what we’re doing. We are doing a better job of looking at what makes a difference with students. And if we have a program that’s not showing results on MAP, then we’d get rid of it. It helps us utilize our resources better.”

Dr. Lewis Holloway
Superintendent
Bulloch County Schools, Georgia

Setting Student Goals

Students become more committed to the learning process when they can set goals and see results. Using the Student Goal Setting worksheet and other NWEA tools, it’s easy for teachers and students to build an action plan together and for parents to become engaged in the process.

“If students can see how much they need to grow in each area, and that adds a lot to the ownership. After a child finishes, they can see their MAP test results immediately; so that in turn helps that student take part in the whole process. It’s right there for them.”

Marlin Baker
Principal
Brooklet Elementary School, Georgia

Predicting College Readiness

To help educators build an educational foundation for college success—years in advance—researchers from the Kingsbury Center at NWEA created the NWEA College Readiness Linking Study. The study conclusively shows high predictive relationships between students’ scores on MAP assessments and the college readiness benchmarks of the EXPLORE®, PLAN®, and ACT® achievement tests.

“...You can do a lot of good work in the primary grades. But if the students don’t do well on the ACT, then what was the point? The NWEA College Readiness Linking Study really helped us make the connection between what we were doing in the classroom and how we expected students to do on the ACT. That has been a great resource.”

Dr. Cade Douglas
Director of Student Learning
Sevier School District, Utah

Projecting Proficiency on State Tests

MAP assessments are closely aligned to the Common Core and individual state standards, so test results can be used to project proficiency on high-stakes tests. Common Core MAP includes technology-enhanced and multiple-choice item types and features that allow for deep assessment of reading, language usage, and mathematics comprehension and increased cognitive complexity, enabling students to demonstrate evidence of their learning.

“If we didn’t have MAP, we’d have no idea what to expect from and how to prepare for ISTEP+ [the Indiana state-mandated test]. Teachers gain valuable insights into the way students learn, so they can best support them in meeting growth targets and passing important tests.”

Barbara Campbell
Staff Development Coordinator
Mt. Vernon Schools, Indiana

Empower Educators with Professional Learning and Comprehensive Support

The NWEA professional development suite is designed to foster a culture in which quality data informs day-to-day teacher practice, student learning, and curriculum. Our workshops, webinars, e-learning resources, modular sessions, and job-embedded programs help educators and leaders get the most out of MAP—at their pace and on their schedule.
MAP Foundation Series

This series of four workshops helps participants build MAP expertise. Any workshop can be offered with an explicit focus on a Common Core implementation. All are modular, and content sections can be recombined to address unique needs and time constraints.

- **The MAP Administration Workshop** is a required part of an initial MAP implementation. It prepares participants for their first test administration and equips them with a foundational understanding of the assessments and reports. An online version of this workshop is also available.

- **The Stepping Stones to Using Data Workshop** brings educators' and administrators' confidence in using MAP reports to the next level by analyzing participants' own student results.

- **The Climbing the Data Ladder Workshop** offers teachers and instructional leaders a more in-depth analysis of the instructional applications of MAP data. Participants learn to leverage MAP reports for lesson planning, differentiation, and scaffolding.

- **The Growth and Goals Workshop** is designed for partners with at least one full year of using MAP data. School and district leaders analyze their growth trajectory, evaluate their goals, and adjust their plans to ensure ongoing success.

Knowledge Academy

All MAP partners receive complimentary access to Knowledge Academy—an e-learning platform that provides a wealth of training resources in a single location. A library of on-demand tutorials, webinars, videos, support documents, and courses lets you and your staff access training where and when you need it in the format of your choice.

Knowledge Academy learning plans and resources are concise and tailored to each user’s role. Resources range from a few minutes to an hour in length. The on-demand format makes it easy for districts to support even a very large staff with flexible and continuous professional development opportunities. Additionally, leaders can use this platform to evaluate learning progress and support teachers who are new to NWEA assessment products.

**Keeping Learning on Track**

This job-embedded, multi-year program builds and sustains expertise in formative assessment as a process across every classroom and all subjects. Keeping Learning on Track® (KLT™) empowers teachers to master key methods to gather evidence of learning—in partnership with their students—and adjust instruction in the moment and over time to improve outcomes.

With a design based on the work of international formative assessment expert Dylan Wiliam, KLT is a powerful complement to MAP. It offers a scalable way to bolster continuous programmatic improvement, academic growth, and increased teacher satisfaction.

In addition to introducing teachers to over 100 proven formative assessment techniques, this program guides districts through the process of building and sustaining Teacher Learning Communities (TLCs) to reinforce the long-term application of those techniques. A rich curriculum prepares all participants to clarify learning intentions, elicit evidence of learning, provide ongoing feedback, and activate students to become owners of their learning and helpful resources for one another.

**Coaching Services**

NWEA coaching involves deep and personalized engagement with leaders and educators, focused on each partner’s goals with MAP and other data. Our expert data coaches work with school and district teams to expand capacity in data application, professional goal setting and planning, and the development of comprehensive assessment plans aligned to student learning. Our three coaching packages are the following:

- **Assessment Program Alignment**
  Focused on building school and district data literacy and making essential connections between assessments and student learning.

- **Data Conversations**
  Focused on analyzing areas of need and successes, and applying data for increased student growth.

- **Goal-focused Planning**
  Focused on building comprehensive and integrated plans that maximize student achievement.

NWEA Assessment Summits take place throughout the United States and feature the insights of NWEA experts in research and content development. Summit topics include the following:

- Effectively Measuring and Modeling Student Growth
- Using Student Growth Data to Inform and Individualize Instruction
- Student Growth Data and District Determined Measures

**MAP Support at Every Stage**

**Implementation Support**

To ease educators into their first experience with MAP, NWEA provides one-on-one implementation support to address questions or issues specific to a partner’s school or district. This personalized support covers all aspects of MAP implementation including set up of the test environment, required and suggested trainings, and MAP testing roles within a district leadership team.

**Partner Support**

NWEA Partner Support is available to help partners with any issues they may be experiencing—and to work with partners in establishing efficient practices that prevent the need for technical assistance. Prior to each testing season, our Partner Support team welcomes the opportunity to discuss pretest set up, roles and responsibilities within a school or district, and tips for effective proctoring and test administration. Assistance is available by phone or email, or contact NWEA through our online web form.

**Account Manager Support**

The MAP experience can be enhanced by the choices an educator makes around testing windows, professional development options, webinar participation, staff training, and more. To help in the decision-making process, a designated Partner Accounts Manager is paired with every NWEA partner, and this relationship focuses on one objective: The educator’s success with MAP. NWEA Partner Accounts Managers assist in short- and long-range planning and guide partners through every option available to meet a specific need.
Extend Your Data to Promote Individual Learning

Learning statements within MAP help educators translate raw data from students’ MAP assessments into actionable plans for instruction, grouping, and more. These powerful resources are aligned to individual state standards, including the Common Core.
The Added Benefits of MAP Learning Statements

Educators use MAP learning statements to personalize instruction, select appropriate topics and skills to address, and maintain a strong growth trajectory for every student. Associating MAP goal scores with instructional content supports teachers in making general inferences about which instructional topics are appropriate for students performing at similar levels.

Learning statement information, when combined with MAP scores and growth norms, is also useful for involving students in goal setting, and serves as a starting point for conversation as the teacher and student plan a learning path for the year ahead.

Leveraging Your Data with NWEA Instructional Content Providers

To extend the benefits of MAP, NWEA partners with leading providers of electronic curriculum and instruction. With these partnerships, MAP scores have been aligned with content so that test results may be used to match each student with appropriate learning activities.

MAP scores are used by Compass Learning®, Study Island®, Triumph Learning™, and other instructional content providers that offer direct supplemental instruction aligned to the students’ performance levels and needs.

NWEA also partners with MetaMetrics®. Students who take MAP Reading tests receive a Lexile® measure correlated to the student’s RIT score, and that Lexile measure can be used by educators to select texts appropriate to a student's comprehension level.
Founded by educators nearly 40 years ago, Northwest Evaluation Association (NWEA) is a global not-for-profit educational services organization known for our flagship interim assessment, Measures of Academic Progress (MAP). More than 6,800 partners in U.S. school districts, education agencies, and international schools trust us to offer pre-kindergarten through grade 12 assessments that accurately measure student growth and learning needs, professional development that fosters educators’ abilities to accelerate student learning, and research that supports assessment validity and informed policy. To better inform instruction and maximize every learner’s academic growth, educators currently use NWEA assessments with nearly 8 million students.

Visit NWEA.org or call 866-654-3246 to find out how NWEA can partner with you to help all kids learn.
